They will provide a space to store our luggage and we will distribute the room keys during the break at 16:30.

# MONDAY- JULY 1ST

## ABSTRACTS

### LECTURE SESSION A (14:30-16:30)

#### Is Creation really that important?

#### EVOLUTION EVERYWHERE

by Noemí Durán

Darwinian evolution is widely accepted in our society as the cause and origin of biodiversity. It is so pervasive that we find evolutionary statements and images not only in scientific and educational contexts but in many other areas of our society, such as advertising, entertainment, and even in religion. The idea behind this everywhere-ness is that science has proven evolution beyond doubt and evolution is today an undisputed fact. But, is this true? We will devote the rest of the conference to show you it is not.

#### YELLOWSTONE FOSSIL FORESTS: THE BIBLE AND SCIENCE RESEARCH

by Leonard Brand

The Yellowstone fossil forests were claimed to indicate that the Bible time scale since creation can't be correct. Research by creationist scientists discovered new evidence that others had not noticed. The fossil forests are now an event that fits in the flood account.

#### THE BIBLE'S AUTHORITY

by Martin Pröbstle

The authority of Scripture rests in the authority of God and the fact that somehow God has delegated his authority to this book, making it in fact His book.

### LECTURE SESSION B (17:00-19:00)

#### Building on the Rock I

#### SERIOUS BIBLE STUDY ISN'T FOR SISSIES

by Martin Pröbstle

The art of biblical exegesis is based on the right attitude and mind of the interpreter and includes the necessary steps and tools.

#### LESSONS FROM THE HISTORY OF THEOLOGY

by Ed Zinke

Most theologies start with philosophical premises. As philosophies change, so do the premises and thus the theologies. The Biblical message is undermined by contemporary philosophies.
